DETAILED ACTION

Drawings

Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

Claim Objections

The claims are objected to because of the following informalities:

Claim 1 should read "A dynamic air classifier" and the claims depending therefrom should read "The dynamic air classifier".

Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 3653

Claims 8 and 12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 8 and 12 recites the limitation "the air-extraction duct ". There is insufficient antecedent basis for this limitation in these claims.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Hanke (US 4,869,786).

Hanke (Fig. 2) teaches a dynamic air classifier for the separation of granular and powdery materials into fractions of different grain sizes comprising

a rotary cage (9), wherein said classifier also comprises

a recovery chamber (2) for fine materials with a outlet bottom (near duct 20), said chamber being defined by a casing (outer shell),

and mobile deflectors (35), wherein said recovery chamber is coaxially arranged in the protrusion of the rotary cage said recovery chamber comprises openings in the casing allowing the passage of the centrifuged material towards ducts for collecting the material located outside the chamber (Fig. 2, see openings in cone-shaped shell leading to ducts near 23). Further, Applicant is respectfully reminded that claim language

Art Unit: 3653

consisting of functional language and/or intended use phrasing is given little, if any, patentable weight as the apparatus must merely be capable of functioning, or being used, as claimed. See MPEP 2112.02, 2114. Here, the device cited above is certainly capable of using the vortex created by the rotary cage for cycloning said material and extracting air through the bottom duct (near 20). Further, the claimed method is anticipated in the normal operation of the device cited above (col. 5, 6).
